3.	Successfully completed Scaled Agile Training	[Attachment](#)

STATEMENT OF PURPOSE

I am Dhanush T N, a boy from a simple background from a small city called Hassan in the State of Karnataka. My father is a PWD Contractor by occupation and my mother is a home maker. I completed secondary and pre-university education with percentages 97.92 and 97.66 respectively and also as a topper at my institutions. Since I have always been keen about Science and technology I decided to pursue Engineering and took up CET and secured a rank of 2418. After four fun and educative years I graduated from RV College of Engineering in 2020 in Telecommunications with a CGPA of 8.84 Although I was able to maintain a strong academic record all throughout my educational years, I was also able to keep myself engaged in several extra-curricular activities also. I have participated and won many quiz and debate competitions at district and State level for my school and colleges. I have also represented my city in U-14 and U-16 cricket tournaments. I have participated in many dance competitions from a young age and also won a few of them at school and district level. I have been part of clubs at my college and have successfully conducted several Blood Donation camps and Alumni meets at a departmental level. During my graduation years, I was able to complete several technical projects and was also able to

publish several papers in Technical Journals and at Conferences also. I have a Google scholars page with links to all my published papers. I was also able to intern at several prestigious organizations such as the Master Control Facility (MCF) and Bharat Sanchar Nigam Limited in the field of satellite communications, 4G Communication and Wireless Fidelity. After my graduation, I started my professional career at Boeing India Private Limited as a Programmer Analyst for the IIOT Team in their ongoing Location Based Services project. Within a few days of my joining I was able to quickly adapt to my work environment and was able to create an impact in my team with my contributions. I lead my team in a successful implementation of a UI Platform called the Kendo within three months of my joining. I have been part of several successful release and productions at my Organization till date. It is this when I realized that I had a knack of leading teams and desired to have a proper stream to improve my managerial skills along with the technical skills that I have acquired during my graduation and work years. In desire of acquiring knowledge of such managerial skills and also to build upon the technical skills I possess with the mixture of business administration I decided to pursue my Masters in Business Administration. I have always believed that both technical and administration knowledge make a powerful union for making an impact in the Professional world. So, in order to acquire such administration and business acumen I feel institutions such as yours play an essential role and I am to hoping to get a positive reply from your esteemed institution where I am sure I would get great support in attaining my Masters degree and make a powerful impact in the professional world.

DECLARATION

I certify that the information given in this application form is correct and true to the best of my knowledge. I agree to abide by the decision of the Institute's authorities regarding my selection for the programme.
